HACKATHON THEME

Solving Unmet Needs with AI

Build a high-impact solution in at least one of these focus areas:

Autonomous & Adaptive AI

Build agents that can be trusted to operate without constant human oversight - handling the unexpected and staying reliable when real-world conditions change.

AI-Native Products & Operations

Many products today use AI as an add-on. This direction is about what products and operations look like when AI shapes them more fundamentally.

Deep Domain AI

Build AI that goes deep in a specific field reflecting how work is actually done, not a simplified version of it. The value comes from genuine domain understanding, not general capability.
